

PMD (UK) Ltd Ethical Gold Policy

All gold used by PMD (UK) Ltd is from audited and ethical sources.

Working to closely audited international standards, our suppliers refining division refines primary sourced (i.e., mined) material from recognised, audited and approved mining sources. In every case a full due diligence process is carried out to determine the origin of any mined material and to determine environmental and ethical compliance. This due diligence process also includes adherence to our supplier's code of compliance and ethics and money laundering legislation.

As early members of the Responsible Jewellery campaign our supplier also has full RJC audit compliance and certification covering both refining, manufacturing and distribution facilities which was achieved in January 2011.

We recognise that the ongoing supply of gold from Fairtrade sources is unlikely to be sufficient to meet demand in the short term, and also that it is impossible to fully guarantee traceability of gold already in circulation.
