

PMD CHEMICALS LIMITED CLIMATE CHANGE STATEMENT

PMD aim to minimise the effect of their operations on climate change.

Our considerations include,

- I. Reducing energy usage by best practice and investment in efficient manufacturing methods.
- II. Sourcing materials locally within the UK or EU where possible to reduce transport and carbon footprint.
- III. Exploring using renewable energy sources where possible. Replacing current outdated light sources with up to date LED systems. Investing in efficient manufacturing equipment and methods.
- IV. Looking to re-use or use reconditioned packaging in all aspects of manufacturing processes e.g. cardboard, packing materials, drums.
- V. Formulating processes to eliminate ozone depleting and persistent chemicals. For all new development projects consider the effects on the environment as a major factor before finalisation.
